

Hongli Ji

Software Engineer (Backend)

London, United Kingdom | +447565806420 | orcasjiovo@gmail.com | <http://linkedin.com/in/orcas-jj-about-me> | <https://github.com/OrcasJi>

Graduate Software Engineer with experience building and deploying real-world applications using Python and JavaScript. Delivered multiple end-to-end projects involving APIs, data processing, and user-facing systems. Improved efficiency in reporting workflows through automation during internship experience. Looking to contribute to practical, scalable software systems in a collaborative engineering environment.

SKILLS

- Python
- JavaScript (Node.js)
- RESTful API Development
- Fast API
- SQL (MySQL, PostgreSQL)
- Data Processing & Backend Logic
- Git & Version Control
- Debugging & Problem Solving
- Cloud Computing (AWS – in progress)
- System Design Fundamentals

PROJECTS

Watcha AI Hackathon (2nd Place) | London, UK

2026

Collaborated in a fast-paced team to design and prototype an AI-powered media application.

- Collaborated in a team to design and build an AI-driven media solution, achieving 2nd place among 100+ participants
- Developed core features of the application, contributing to rapid prototyping under strict time constraints
- Presented the final product to judges, communicating technical ideas and product value clearly
- Adapted quickly to feedback and iteration cycles, improving the overall quality of the solution within a limited time

Cloudflare AI Chat Agent | London, UK

2026

Built a serverless AI chat system with persistent conversation state and real-time API interaction.

- Developed a chat API using Cloudflare Workers, enabling real-time request handling in a serverless environment
- Integrated LLM capabilities via Workers AI (Llama 3), supporting dynamic and context-aware response generation
- Designed stateful conversation management using Durable Objects, ensuring persistent multi-turn interactions
- Structured API endpoints (GET/POST) for frontend communication, improving clarity and separation of backend logic

AI Shopping Assistant | Queen Mary University of London, UK

2025

Designed and built a backend system that converts natural language queries into structured database operations for product search.

- Designed RESTful APIs using FastAPI to handle user queries, enabling consistent request processing and structured data retrieval
- Developed an NLP pipeline using BERT for intent classification, improving the system's ability to handle ambiguous and incomplete inputs
- Implemented dynamic filtering logic with MySQL (category, price, style), supporting flexible query execution across structured datasets

- Built fuzzy search and ranking mechanisms, enhancing the relevance and usability of returned search results

BookmarkHub (Full-Stack Application) | London, UK

2026

Developed a full-stack bookmark management system supporting search, tagging, and data retrieval.

- Built RESTful backend services using Node.js and Express, enabling efficient storage and retrieval of user data
- Designed a PostgreSQL schema with tagging and filtering logic, supporting scalable and structured data queries
- Implemented full-text search and tag-based filtering, improving the accuracy and usability of content retrieval
- Developed a React-based frontend integrated with backend APIs, enabling seamless end-to-end user interaction

PROFESSIONAL EXPERIENCE

Bank of China (UK)	London, UK
Technology Intern	July 2024 - August 2024
• Automated financial reporting workflows using Excel VBA, reducing manual processing effort in daily operations • Developed scripts to process structured data files, ensuring consistent and accurate report generation • Implemented data validation and business logic checks, improving the reliability of reporting outputs • Collaborated with internal stakeholders to gather requirements, aligning technical solutions with operational needs	

EDUCATION

Queen Mary University of London London, UK	September 2024 - September, 2025
MSc Computer Science, Grade: Merit (2:1 equivalent)	
University of Birmingham Birmingham, UK	September 2021 - July, 2024
BSc Computer Science, Grade: Merit (2:1 equivalent)	

COURSES

Programming with Python Professional Certificate - OpenEDG Python Institute	Apr 2026
Covered Python programming fundamentals and object-oriented programming (OOP) principles.	
Python Object-Oriented Programming - LinkedIn	Apr 2026
Focused on applying OOP concepts such as classes, inheritance, and modular design in Python.
